

# JMRI Operations

Dennis Drury

# So what is JMRI?

JMRI stands for Java Model Railroad Interface. It includes:

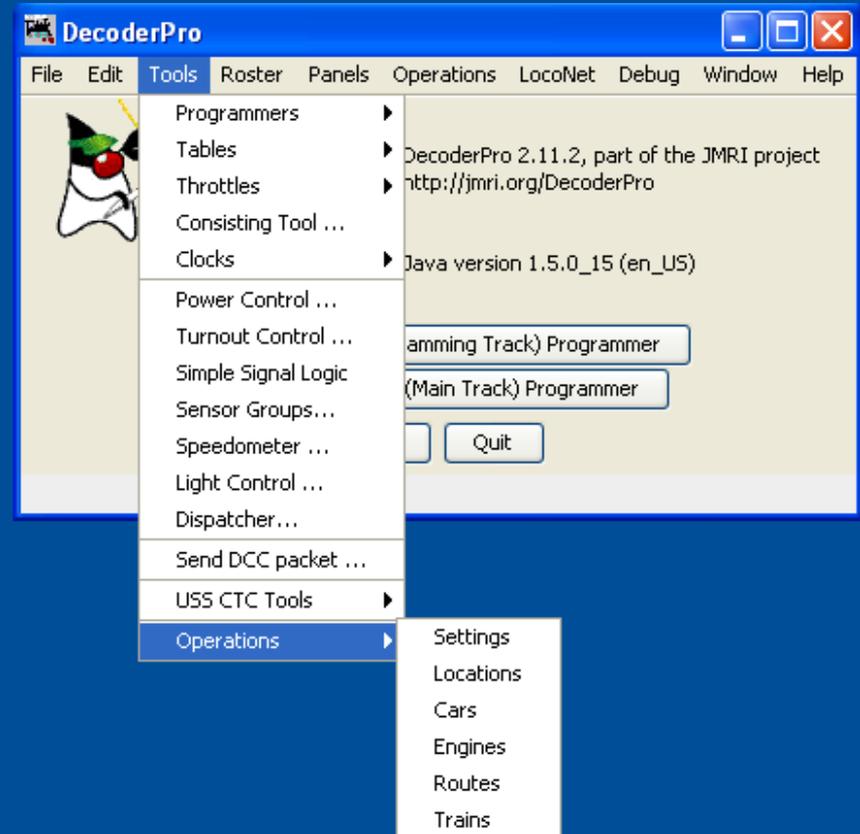

- DecoderPro®
- PanelPro™
- SoundPro
- And Operations

# So what is JMRI Operations?

- A. JMRI Operations is a computerized car forwarding / management system
- B. The operations program will allow you to print out the paperwork that will enable your operating crew to run your layout in a more prototypical manner.
- C. If you have also created a panel for your railroad, the operations program will place icons on it to track the progress of your trains as they run across the railroad.

# Sounds great. How do we begin.

The operations program is found in all the JMRI startup applications. Click on Tools then Operations to get started.

# Paperwork examples

The next three slides show examples of the paperwork generated.

The K Falls switcher list shows the yard engine moving a cut of cars from the arrival track and sorting them into the correct outbound blocks. All the crew has to do is follow the list and check off the entries as the work is done.

The second list shows a portion of the work for the Southern Pacific RVEUY train. It shows the train being built in Roseville and the work it does in Klamath Falls.

Last is the local that runs on my layout, the Gilchrist Turn.

# Types of Tracks

The program has four types of tracks you can enter. They are Spurs, Yard, Classification / Interchange and Staging.

- Spurs are your basic industry tracks.
- Yard tracks are for car storage
- Classification / Interchange tracks are used by the program to move cars from one railroad to another or from one train to another within the same railroad and are the tracks use to set up a classification yard.
- Staging tracks are used to park trains prior to their appearing on the railroad or after a train has run.

Note that a location can have either staging or all other types of tracks but not both.

# Spurs

Spurs are the industry tracks where freight cars are loaded and unloaded during the course of our operating sessions.

# Adding Cars

This is the Edit Car window.  
Here you can input the:

- Road (reporting marks)
- Road number
- Car type and category
- Length
- Weight
- Location
- Color
- Load
- Kernel
- Year built
- Car owner

The screenshot shows the 'Edit Car' window with the following fields and controls:

- Road:** Dropdown menu set to 'UTLX', with an 'Edit' button.
- Road Number:** Text input field containing '910305', with a 'Clear' button.
- Type:** Dropdown menu set to 'Tank-T9P', with an 'Edit' button. Below it are checkboxes for 'Passenger' (unchecked), 'Caboose' (unchecked), 'Hazardous' (checked), and 'FRED' (unchecked).
- Length:** Dropdown menu set to '63', with an 'Edit' button.
- Weight:** Two input fields: 'Ounces' (5.3) and 'Tons' (106). A 'Calculate' button is between them. A checked 'Auto' checkbox is on the right.
- Location and Track:** Two dropdown menus, one empty and one with a downward arrow. A checked 'Auto' checkbox is on the right.
- Optional Color:** Dropdown menu set to 'Black', with an 'Edit' button.
- Load:** Dropdown menu set to 'MTY', with an 'Edit' button.
- Kernel:** Empty dropdown menu, with an 'Edit' button.
- Built:** Text input field containing '04-82'.
- Owner:** Dropdown menu set to 'DMD', with an 'Edit' button.
- Comment:** Text input field containing 'LPG Tank Car'.

At the bottom of the window are three buttons: 'Delete', 'Add', and 'Save'.

# AAR vs. Descriptive Codes

One of the choices you were given in the Settings screen is whether to use AAR or Descriptive car types. Regardless of which type you choose you can add a modifier that will allow you to fine tune how the program assigns cars to various industry sidings. We'll talk about that in the next slide.

# Using the “-” function

The dash is an important component in Operations. When you enter or modify a car type, inserting a “-” (dash) followed by more text after the car type the program will use all the text in the car type to assign a particular car to an industry, but will only print out the text before the dash in the switchlists and manifests. Examples might be XM-1, XM-2 or XM-3; or Boxcar-1, Boxcar-2 or Boxcar-3.

# UMLER codes

UMLER codes are a way to let the program know the difference between cars of the same general type. For example, Boxcar-BEN is a Standard boxcar (B) that is between 50 and 60 feet long with a cushioned under frame (E) and is a double door car. Boxcar-D5C is a DF (Damage Free) boxcar that is between 49 and 58 feet long and has a cushioned under frame.

# Adding Locomotives

This is the Add Locomotive screen. You can import the roster information from DecoderPro if you're already using JMRI or you can enter it manually. You can enter:

- Road
- Number
- Model
- Type
- Length
- Location and track
- Weight
- Horsepower
- If the unit is part of a consist
- Year built
- Owner

Note that many of these fields can be edited.

The screenshot shows the 'Edit Locomotive' window with the following fields and controls:

- Road:** A dropdown menu set to 'COW' and an 'Edit' button.
- Road Number:** A text input field containing '2001' and a 'Clear' button.
- Model:** A dropdown menu set to 'GP38' and an 'Edit' button.
- Type:** A dropdown menu set to 'Diesel' and an 'Edit' button.
- Length:** A dropdown menu set to '59' and an 'Edit' button.
- Location and Track:** Two dropdown menus, the first set to 'Klamath Falls' and the second set to 'Klamath Engine Lead'.
- Optional:**
  - Weight Tons:** A text input field containing '125'.
  - Horsepower:** A text input field containing '2000'.
- Consist:** A dropdown menu set to '2003' and an 'Edit' button.
- Built:** A text input field.
- Owner:** A dropdown menu set to 'DMD' and an 'Edit' button.
- Comment:** A text input field.

At the bottom of the window are three buttons: 'Delete', 'Add', and 'Save'.
